

I CLAIM:

1. A card device comprising:
a board member, and
at least one antenna device printed on said board member, said
5 at least one antenna device including a T-shaped structure having a
first segment and a second segment coupled together to form said
T-shaped structure.

2. The card device as claimed in claim 1, wherein said at least
one antenna device includes a conductor provided around said
10 T-shaped antenna device to form a T-shaped hollow space in said at
least one antenna device.

3. The card device as claimed in claim 1, wherein said board
member includes a transmission circuit provided thereon, and said
at least one antenna device includes an output terminal coupled to
15 said transmission circuit.

4. The card device as claimed in claim 1 further comprising at
least one second antenna device printed on said board member, said
at least one second antenna device including a T-shaped structure
having a first segment and a second segment coupled together to
20 form said T-shaped structure.

5. The card device as claimed in claim 4, wherein said at least
one antenna device and said at least one second antenna device each
includes an output terminal coupled together.

6. The card device as claimed in claim 4, wherein said at least
25 one second antenna device includes a conductor provided around
said T-shaped antenna device to form a T-shaped hollow space in
said at least one second antenna device.
